RESEARCH PROJECTS

CCF-Huawei Poplar Forest Fund | *Member*

Oct. 2022 – Jun. 2023

- Investigated memory-reliability issues of Huawei Kunpeng processors through static multi-dimensional variable hazard analysis.
- Constructed control-flow graphs (CFGs) and temporal control-flow graphs (TCFGs) from C program assembly code, and conducted loop, cache, and access-heat analyses.
- Designed read-write feature analysis algorithms and contributed to two patent applications with the team.

Lattice-Based Multi-keyword Fuzzy Public Key Searchable Encryption | *Leader*

Sep. 2022 – Mar. 2023

- Designed a public-key searchable encryption scheme based on ring-LWE and ring-SIS, supporting multi-keyword fuzzy search.
- Implemented the full workflow, including key generation, trapdoor generation, searchable ciphertext generation, and test algorithms.
- Evaluated the scheme with millisecond-level runtime and presented it in the National Cryptography Technology Competition.
